EXPERIENCE

Umbratic

Reno, NV

Founder & Lead Engineer | Private AI platform

Mar. 2025 – Present

- Build a private AI workspace in Electron/React, with a Rust agent runtime and Go gateway for local llama.cpp and company-managed vLLM.
- Implement workspace tools, context compression, code review, and SSH task execution; enforce tool permissions and keep model access behind the authenticated gateway.
- Built document ingestion and Qdrant retrieval with team access filters, plus an admin console for model processes, user enrollment, and device revocation.
- Built tools to create and edit documents, spreadsheets, presentations, and PDFs; added automated file checks and tests that verify spreadsheet content after edits.
- Reduced search latency from 15 seconds to **16 ms**, cold starts by **96%**, and idle memory by **88%** during the native rewrite.

Crytica Security

Reno, NV

Software Engineer | Cybersecurity startup

Nov. 2025 – Present

- Lead a multi-tenant admin console in JavaScript and PHP over a C backend, with centralized authorization and parameterized SQL. Drive requirements through release with leadership, operations, and engineering.
- Led a C synchronization rewrite across **9+ distributed ledgers**; used parallel subprocess isolation to contain failures and cut synchronization time **85%**.
- Built a C deployment CLI that cut deployment from over an hour to **under 5 minutes**, with timeouts, retries, validation, and **100+ tests**.

PROJECTS

UpDrafted | *Creator & Lead Engineer, Recruiting Platform*

May 2025 – May 2026

- Built two Next.js/TypeScript apps for athlete recruiting and administration, with sport and position filters, connections, transfer verification, and moderation workflows.
- Designed shared PostgreSQL/Drizzle data models with **14 row-level security policies** and transaction-scoped user context; encrypted stored messages with AES-256-GCM.
- Integrated Stripe subscriptions, signed webhooks, and plan-based usage limits; built Cloudflare R2 file storage and Docker deployment pipelines with GitHub Actions.

Infernal | *Independent Developer, Multiplayer Game*

In development

- Build a Unity/C# game with FishNet networking, server-controlled combat and team visibility, PlayFab matchmaking, and dedicated server lifecycle management.

EDUCATION

University of Nevada, Reno

Reno, NV

B.S. in Computer Science and Engineering, Minor in Statistics

May 2025

TECHNICAL SKILLS

Languages: Rust, Go, C, C#, TypeScript/JavaScript, Python, SQL, PHP

AI Systems: Agent runtimes, retrieval/RAG, vLLM, llama.cpp, Qdrant, PyTorch, LoRA

Systems: Electron, React, Next.js, PostgreSQL, Linux, Docker, Git, REST/SSE, Unity, CI/CD

Areas: Distributed systems, concurrency, access control, performance optimization, automated testing
