Experience

Umbratic Reno, NV

Founder & Lead Engineer | *Private AI Platform* *Mar. 2025 – Present*

- Built a private agent workspace: Electron/React desktop, Rust harness, and authenticated Go gateway for local llama.cpp and company-managed vLLM.
- Reduced search latency from 15 seconds to **16 ms**, cold starts by **96%**, and idle memory by **88%** in the native rewrite.
- Engineered the model/tool loop with dependency-aware parallel execution, bounded retries, repeated-call guards, cancellation, and resumable conversation state.
- Implemented context compaction, on-demand skills, workspace search, and Qdrant RAG with team access filters; added tool permissions, worktree review, and redacted telemetry.
- Authored reusable skills and artifact tools for documents, spreadsheets, presentations, and PDFs; develop through scoped agent tasks, patch review, and test-and-fix loops.

Crytica Security Reno, NV

Software Engineer | *Cybersecurity startup* *Nov. 2025 – Present*

- Built a full administration/configuration console in JavaScript/PHP over a C backend; used coding agents for implementation, with centralized authorization and parameterized SQL.
- Led a C synchronization rewrite across **9+ distributed ledgers**; isolated parallel subprocess failures and cut synchronization time **85%**.
- Built an end-to-end installer and C deployment CLI, cutting deployment from over an hour to **under 5 minutes** with timeouts, retries, validation, and **100+ tests**.

Projects

UpDrafted | *Creator & Lead Engineer, Recruiting Platform* May 2025 – May 2026

- Built recruiting and admin apps with agent-assisted implementation and review: Next.js/TypeScript, athlete discovery, verification, moderation, and Stripe subscriptions.
- Designed PostgreSQL/Drizzle models with **14 row-level security policies** and transaction-scoped user context; encrypted stored messages with AES-256-GCM.
- Integrated Cloudflare R2 file storage, plan-based usage limits, signed Stripe webhooks, and Docker deployment pipelines with GitHub Actions.

Infernal | *Independent Developer, Multiplayer Game* In development

- Build Unity/C# multiplayer combat with FishNet, server-controlled team visibility, PlayFab matchmaking, and dedicated server lifecycle management.
- Authored reusable skills for agent orchestration, netcode, and asset generation; coordinate scoped agents through patch integration, repeatable builds, and native gameplay validation.

Education

University of Nevada, Reno Reno, NV

B.S. in Computer Science and Engineering, Minor in Statistics *May 2025*

Technical Skills

Agent Engineering: Tool loops, context compaction, skill design, orchestration, RAG, permissions
Automation: Evaluation, test-and-fix loops, Git worktrees, regression testing, telemetry, CI/CD
Languages: Rust, Go, C, C#, TypeScript/JavaScript, Python, SQL, PHP
Platforms: Electron, React, Next.js, PostgreSQL, Docker, Unity, vLLM, llama.cpp, Qdrant
